PROFILE

Results-driven technical support and enablement professional with over a decade of experience in Helpdesk, IT, product, and SaaS support. Skilled at turning deep, hands-on troubleshooting experience into training content, lab exercises, and onboarding curricula that help new engineers ramp up faster. Commended for delivering high-quality customer service, technical acumen, and product insight, and valued as a collaborative partner who connects support, product, and enablement teams to deliver the right experience for the end customer. My experience has prepared me for roles including:

- technical enablement
- consulting
- knowledge management
- product and program management
- technical advisory
- technical support
- technical support operations
- technical writing

PROFESSIONAL EXPERIENCE

Datadog

New York, NY

Technical Escalations Engineer II

Nov 2024 - Present

- Tier 2 Support Role: Serve as an escalation point for Datadog's Real User Monitoring product
- Oversee 5-7 escalations per week
- Review customers' implementations of RUM through the Datadog browser and mobile SDKs
- Troubleshoot SDKs across JavaScript, Android (Kotlin/Java), iOS (Swift/Objective-C), and React Native
- Serve as a trusted advisor for customers and make recommendations on how to improve their overall RUM usage
- Design and deliver training sessions, sandboxes, and labs to enable Datadog employees on the RUM product
- Create KB articles on processes and technical troubleshooting
- Mentor new hires and coach them on best ticket practices and troubleshooting steps
- Additional product areas supported: Product Analytics and Session Replay, both built on top of Datadog RUM and geared towards different use cases

Technical Support Engineer II

Nov 2023 - Nov 2024

- Partnered with devops teams using Datadog's platform for their cloud and infrastructure monitoring
- Drove 20-25 issues to resolution per week
- Served as product specialist for synthetic user testing and real user monitoring products
- Diagnosed and resolved customer issues using Datadog logs and flares
- Reviewed YAML files and provided guidance on optimized use and best practices for Datadog's product lines
- Reviewed JavaScript code that collected user interactions on websites
- Reproduced and resolved technical issues across multiple environments
- Assessed feature requests and bugs, partnering with product and engineering teams to develop solutions
- Wrote scripts to test API calls and advised customers on how to leverage the Datadog API in their stack
- Developed training and enablement content for new hires and cross-team training

Akamai Technologies

Cambridge, MA | New York, NY

Associate Product Manager

Nov 2021 - May 2023

- Responsible for Akamai's Services and Support products: Premium 3.0, Enhanced SLA, Standard Support, Event Support, Broadcast Operations and Command Center (BOCC)
- Wrote and drove OKRs to completion
- Worked on improvements for 12 automated alerts for errors, unauthorized/unauthenticated users, and traffic volume on customer websites
- Conducted meetings with a team of 16 members from various field teams on product improvements
- Developed the roadmap for our Premium 3.0 product with a team of 4: product managers and architects
- Ran market analysis to identify improvements to product offerings

- Oversaw migration of customers from Premium 2.0 to Premium 3.0 products

Senior Technical Support Engineer

Jan 2016 – Oct 2021

- Worked with 15 Premium Akamai customers to debug and diagnose issues with their websites
- Promoted from Technical Support Engineer (TSE) to TSE II and ultimately Senior TSE
- Managed multiple customer escalations for premium eCommerce and public sector customers which had high executive visibility within both Akamai and the customers' organizations
- Partnered with relevant stakeholders at Akamai to drive technical issues to resolution: engagement managers, project managers, solutions architects, support advocates, engineers, analysts, C-level executives, sales teams
- Served as an escalation point for standard customers who were at risk of churn and requested an aligned resource
- Wrote and maintained quality knowledge base articles for internal and external processes
- Investigated preventative measures and solutions to assist customers with common pain points
- Served as a mentor for multiple team members when they started at Akamai

IBM Cloudant

Boston, MA

Client Support Engineer, US East Lead

Jul 2014 – Jan 2016

- Provided support for customers of Cloudant's Database Platform and resolved 15-20 tickets/week
- Worked with CRM administrators to funnel tickets into Slack chat spaces and view PagerDuty integrations
- Improved internal documentation on GitHub for processes and onboarded/mentored new team members
- Worked directly with operations engineers, technical account managers, and senior developers of the core software to troubleshoot and identify solutions for customers of the platform

Boston University College of Engineering

Boston, MA

Student IT Consultant

Sep 2012 – Jul 2014

- Assisted new student hires with fielding tickets from engineering faculty, staff, and students
- Wrote processes to assist peers with their day-to-day tasks
- Assisted senior and tenured faculty, staff, and graduate students on hardware and software requirements to carry out their research projects

AWARDS & HONORS

AkaLedes & Spot Awards

Jan 2016 – May 2023

- Presented to employees who go above and beyond their day-to-day tasks; recognized by management and peers

Most Impactful Team

April 2018

- Presented to a team of support engineers staffed during the holiday shopping season to ensure website readiness for eCommerce websites

Customer First

April 2018

- Presented to a team of support engineers who delivered exceptional value on Akamai products to their aligned customers

PROJECTS

Embed with TS Enablement

Aug 2026

- Developed an HTML template for use in Rise 360 courses
- Revamped RUM L2-L5 courses and reviewed content for accuracy and up-to-date coverage
- Built a bank of 80 questions used across L2-L5 courses
- Revamped and developed two engaging lab exercises
- Contributed to revamping the mock technical call format

Datadog RUM Onboarding

Apr 2025 – Aug 2025

- Developed labs for levels 3 to 5 of the onboarding curriculum for Datadog support engineers
- Developed a website in CSS, JS, and HTML to serve as the basis for implementing and trying out Datadog RUM
- Partnered with Datadog's technical enablement team to develop and review course content
- Served as a resource for live, hands-on trainings

Akamai Premium 3.0 Alerts

Nov 2021 – May 2023

- Conducted meetings with a core team to improve alerts delivered as part of a managed service
- Developed the product roadmap in Confluence, tracked JIRAs, and communicated updates to respective teams
- Coordinated with engineering to improve threshold recommendations for the core alerting engine

Akamai Enhanced SLA

Jul 2022 – May 2023

- Assessed current market value of an enhanced SLA offering and revised pricing strategy around the product
- Served as liaison with support leadership to understand pain points in delivering and meeting enhanced SLAs

Akamai Knowledge Centered Support (KCS)

Jul 2017 – Nov 2021

- KCS Coach: guided 4 teammates on writing quality KB articles and advancing through levels of the KCS process
- Identified duplicate articles and led consolidation efforts for easier readability and searchability

IBM Bluemix/Cloudant Integration

Jul 2015 – Jan 2016

- Led efforts to ensure a seamless user experience for users accessing Cloudant through the IBM marketplace
- Updated the backend database to resolve failed account signups and documented processes for co-workers
